Named after Gaius Julius Caesar the famous ruler of the Roman Empire. Inspired by the beauty, elegance and longevity of the ancient Roman architecture. Like it's historic ancestors, the creation is rather a piece of artwork than a plain space-definer. Zoning is a key characteristic in today's office space, and Gaius is a strong and charming addition that provides designated zones without the harshness of solid partitions and walls.

a note from our designer_

l've always admired ancient Roman architecture, I find it fascinating. The symmetry and the uniform layout really appeals to me.

Looking for a product that has all this style and is sustainable, I started sketching and the concept of Gaius was born. It's a zoning product that has endless colour options and can be installed and dismantled with ease if you need to move, eliminating the waste going to landfill.

gaius_ sustainable zoning structure

Gaius is a sustainable zoning structure with the option of a sheer fabric or an acoustic panel insert. Taking shape in the form of a strong wooden frame with soft curves, the sheer fabric softens spaces with gentle screening, while the acoustic board provides privacy and sound absorption. Both panels provide visual differentiation for zones in the workplace.

gaius sheer zoning structure
